WHEN the snow begins to disappear in Spring, the Snowdrops, the Seillas, and the Crocus come forth to greet the gardener who wisely planned—and planted—the bulbs in early fall. The floral pageant continues to increase in beauty as the Daffodils and Jonquils join the parade, followed by the early Tulips, and finally ending in June with the Darwins' gorgeous display. The gardener should remember that fall is the only safe time for planting Dutch Bulbs, and the best time for Madonna (Candidum) Lilies and many hardy perennials and rock-plants. Fall is the ideal time to transplant large evergreens, flowering shrubs, and to make a "living fence" of Japanese Yew and similar low-growing evergreens. So we say, do not delay until Spring. Plants get a good start before the ground freezes if set this fall.

Darwin Tulips

These Tulips bloom in late May and early June. They are tall growers, varying from 20 to 30 inches in length of stem. In addition to their value in the garden, they are especially useful for cutting.

You Should Plan Now for Spring Flowers

THANKSGIVING DAY, the midwinter holidays, and then—*Spring*. It's only a short time, so your thoughts must now turn to the Spring garden. The bulbs are all here, and of the usual Lawrence quality. We know you will be satisfied.

Likewise, we would emphasize the wisdom of securing bulbs, plants, evergreens, and similar material at the earliest minute. You may not wish to plant at once, but you should place your order for delivery at the desired time. You will be protected against disappointment and a possible increase of prices.

Evergreens Have Never Been Better Nor Offered at Such Modest Prices

In days gone by people thought Evergreens were the "diamonds" of the garden because of the high prices. Those days are gone. Evergreens cost no more than good shrubs, and in most plantings are far more useful. You can now change your garden groups in the same fashion as you change furniture or decorations of your home. Notice our special fall prices, and remember that you can get five trees at the ten rate, twenty-five at the hundred rate.

Taxus cuspidata

JAPANESE YEW *Taxus cuspidata*

The Japanese Yew is the finest evergreen that can be used in landscape work. It is ideal in a small place and on large estates there is always room for a dozen or a hundred. Heat or cold does not affect it; the foliage is deep rich green; the red berries in fall give a touch of contrasting color. At our special fall prices you certainly can afford several specimens to give added value to your home.
